Introduction

A world-class oilfield services company built on uncompromising ethics.

The leading regional, integrated oilfield services company in the Middle East.
With our headquarters in Baghdad and operating office in UAE, Makamin Altaqa has grown steadily to become the leading independent oilfield services provider in the region, with the largest fleet of equipment, number of people and range of services.

Our clients benefit from our unrivalled understanding of their technical challenges and unique environmental, geological and cultural conditions that exist within our home markets. By merging our invaluable local experience with a highly skilled and motivated global team, the latest technologies and quality-driven processes, we have succeeded in establishing a reputation for delivering customized and competitive solutions regardless of the conditions.

07 Our Clients

Our clients should not have to compromise to complete their project they deserve the very best.

Engineering

We apply our engineering design skills to a wide range of works in the Oil & Gas sector, right across the engineering project lifecycle.

From feasibility studies to commissioning and start up in the execution of EPC projects; from site assistance to operation & maintenance for general services; from detailed engineering design, including technical deliverables, material requisition, technical bid evaluation and supplier follow-up, to planned maintenance shut down and predictive maintenance engineering.

Managing complexity, unlocking value

We combine creative thinking with practical experience and data from projects and operations to help unlock value from energy assets.

Our engineering and consultancy services span the energy asset life cycle, from concept design, screening and selection, through front end engineering (FEED) into project execution, pre-operations and operations support through late life and into decommissioning.

Project development consultancy

Focused on supporting at the earliest project stages, we provide services to support field development planning, concept design, screening, and selection to help smooth the patch to project sanction. We use our EPC experience and operations know-how to shape our solutions, so that your project can progress with robust designs, costs, and schedule estimations that can be trusted. Our consultancy services include:

- Process technology
- Structural analysis
- Subsea and pipelines
- Safety and environmental

Rotating machinery

Asset management solutions

We offer expert advice and services to support the pre-commissioning and operations phases of an asset. This includes operational readiness and optimisation, integrity management, maintenance and reliability solutions and asset performance consulting. We are uniquely placed to identify best-practice pre-commissioning methods and opportunities to optimise operations through our access to insights and rich data drawn from operating assets internationally.

Combining all these elements allows us to offer an integrated consultancy service that spans the entire asset life cycle and, in turn, drive more value across your asset-based projects.

> Expert advice and services to support the pre-commissioning and operations phases of an asset.

Constructability

Constructability is the project management technique that allows us to analyze all project processes aiming to optimize construction sequences and practices.

We identify interferences and possible schedule impacts before starting construction preventing errors, delays or cost overruns.

The oil and gas installations we design, and build have to survive extremely challenging and harsh environments, from desert heat to sub-zero arctic temperatures, and so require deep construction expertise, strong project management and a clear focus on safety, integrity and quality.

We deliver complex construction projects in challenging and diverse environments

Procurement

The key success factors to our supply chain operations are:

For us procurement is management of the overall supply chain: engineering, purchasing, expediting, logistic, construction works together in a integrated environment with a unique platform that allow priority management and traceability of the resources from the design and the material requisitions until the physical installation in site. Local purchasing and logistics are structured in all the countries with stable organizations in order to support the projects and capitalize the experience of the local markets and rules.

- An operational structure which permits prompt approvals and decision making
- Building and maintaining excellent relationships throughout the vendor community
- Early commitment to long lead items
- Strong engagement with vendors at the proposal stage
- Forward planning - looking and booking ahead
- Pro-active expediting (desk and field), including extensive use of the support office network, resident inspectors and
- frequency of management visibility and visits
- Highly experienced team
- Values driven behaviours in everything we do

Manpower Supply

Reliable workforce solutions for demanding oilfield operations.

Makamin Altaqa supports oil and gas operators, EPC contractors and service companies with fit-for-purpose manpower supply solutions for drilling, workover, maintenance, construction, commissioning and field support activities. Our approach combines local market knowledge, rapid mobilisation capability and a strong focus on safety, competency and operational continuity.

Our scope includes:

- Supply of skilled, semi-skilled and general manpower for oilfield, construction and facility support operations.
- Provision of technical personnel including supervisors, engineers, HSE personnel, operators, technicians, welders, fitters, electricians, rig support crews and general labour.
- Recruitment, screening, onboarding and mobilisation support in line with project requirements and client procedures.
- Short-term, long-term and campaign-based staffing models to support shutdowns, maintenance campaigns and project peak-load requirements.
- Coordination of accommodation, transportation, site access, PPE and workforce administration where required by the project.

Reliable Source

Logistics Support

Coordinated field logistics from mobilisation through project delivery.

Makamin Altaqa provides logistics support services designed to keep field operations moving safely and efficiently. We support clients with coordinated movement of people, equipment, materials and consumables across Iraq and the wider region, with emphasis on responsiveness, traceability and compliance with local requirements.

Our scope includes:

- Transportation and field logistics support for personnel, tools, equipment, consumables and project materials.
- Coordination of light and heavy vehicles, trucks, cranes, forklifts and site handling equipment through approved providers where required.
- Support for warehousing, laydown areas, material control, inventory tracking and distribution to site.
- Customs, clearance, permits, documentation and local coordination support for domestic and cross-border movements.
- Camp, accommodation, catering, security coordination and general project support services where required by the client scope.

Integrated support

General Well Services

Delivered through strategic partnership with H2Oil.

Makamin Altaqa provides access to a broad portfolio of well services through its partnership with H2Oil, combining local market presence, rapid mobilisation support and field execution capability with specialised technical expertise across the well lifecycle.

General well services through partnership

Fit-for-purpose support for drilling, completion, intervention and production activities.

Drilling & Workover

Integrated drilling and workover support for exploration and development wells, focused on efficient execution and reduced cycle time.

Cementing & Stimulation

Cementing, acidizing, matrix stimulation and remedial treatments to support well integrity and performance.

Coiled Tubing Services

Cleanout, milling, logging, nitrogen kickoff, perforation and well enhancement operations.

Wireline & Logging

Open-hole and cased-hole wireline support, logging programs and data acquisition for reservoir and production decisions.

DST & Well Testing

Drill stem testing, surface testing, downhole sampling and production logging to evaluate well deliverability.

Fluids & Solids Management

Drilling and completion fluids, waste handling, solids control and project-specific fluids support.
